

Customers Start Using Sky ATP for FREE with all SRX Purchases

Sky ATP is a cloud-based service that provides complete advanced malware protection. Integrated with SRX Series Services Gateways, Sky ATP delivers a dynamic anti-malware solution that can adapt to an ever-changing threat landscape. Analyze EXE files FREE; activate other capabilities with subscription

All SRX series buyers can begin experiencing the benefits of Sky Advanced Threat Prevention (Sky ATP) by activating the free version supplied with each unit. When customers activate the free version and see how effectively Sky ATP defends against malign EXE files, we believe they'll want to purchase a subscription to the premium version. It fully analyzes EXE and PDF files, Microsoft Office traffic, and also performs limited analysis on archives, Java, active media, dlls, mobile applications, audio/video, and source code.

To activate the free version, customers should follow steps 2-5 in the [Sky Advanced Threat Protection Quick Start Guide](#). The premium version is subscription based. Follow step 1 to upgrade customers to the premium version.

For sales representatives of participating partners, eligible sales of Sky ATP on all SRX series platform qualify for Partner Rewards, as described in our article in the Partner Program News section of this newsletter. You can visit our Partner Rewards page in Partner Center for complete details.
